

Project Management with EPLC and ITIL: Part 2

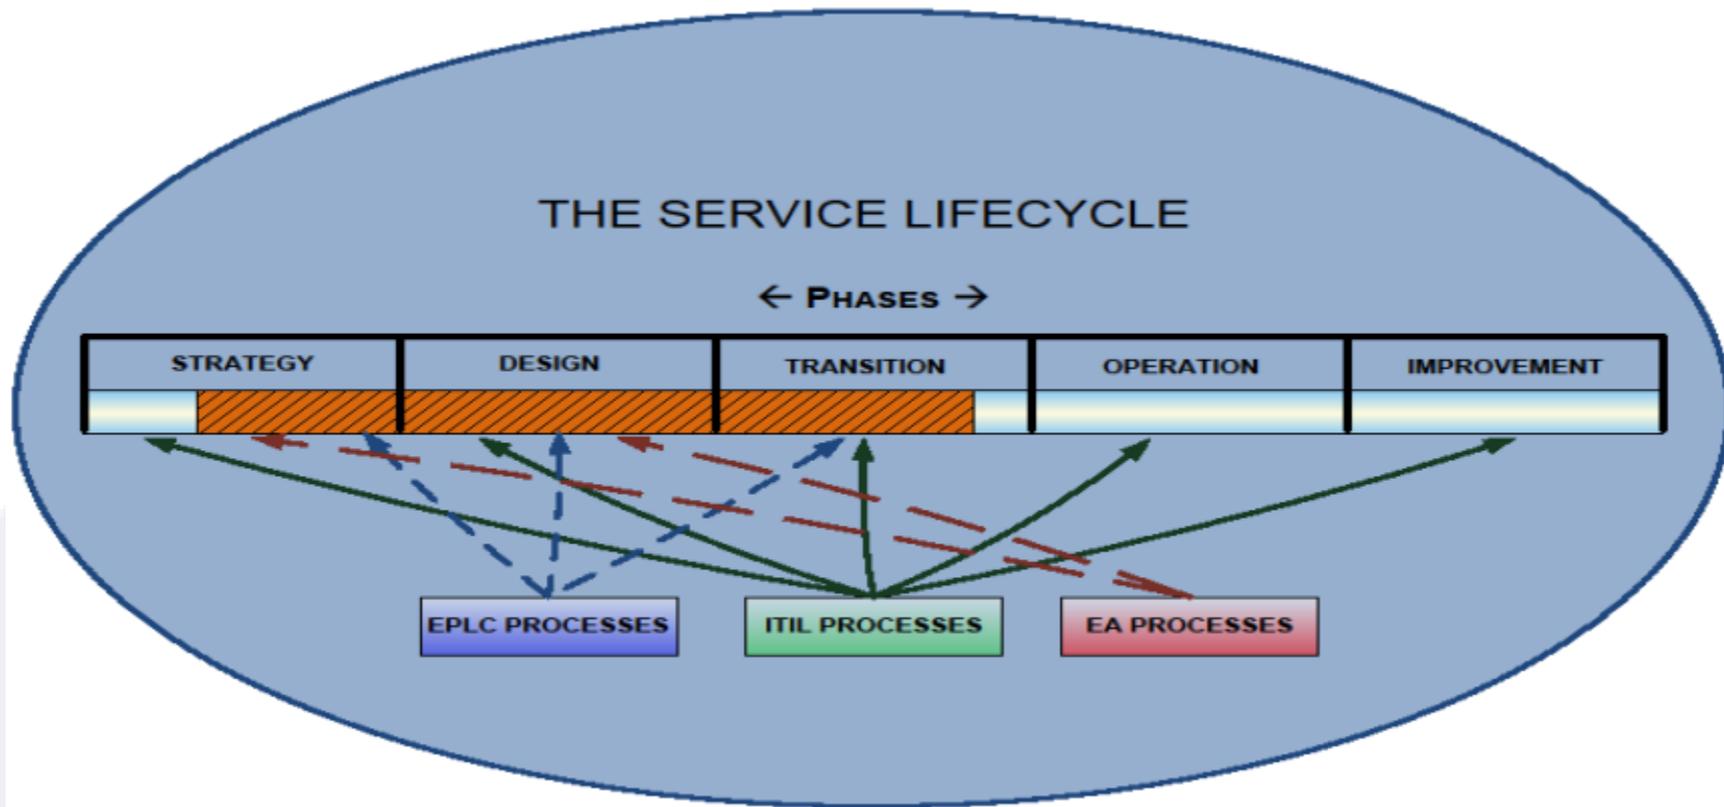

*Integrating ITIL in the Early Phases of the
Enterprise Performance Lifecycle (EPLC)*

John Castilia, PMP
Service Management Office
CIT

Presentation Goals

- Provide a suggested approach for managing projects in alignment with EPLC and ITIL
- Offer a brief refresher on EPLC and ITIL
- Identify specific deliverables from each that can be leveraged to improve project management.

Service Lifecycle Viewpoint

 MULTI-PROCESS INVOLVEMENT (PROJECT LIFECYCLE)

 PRIMARILY ITIL FRAMEWORK (SERVICE LIFECYCLE)

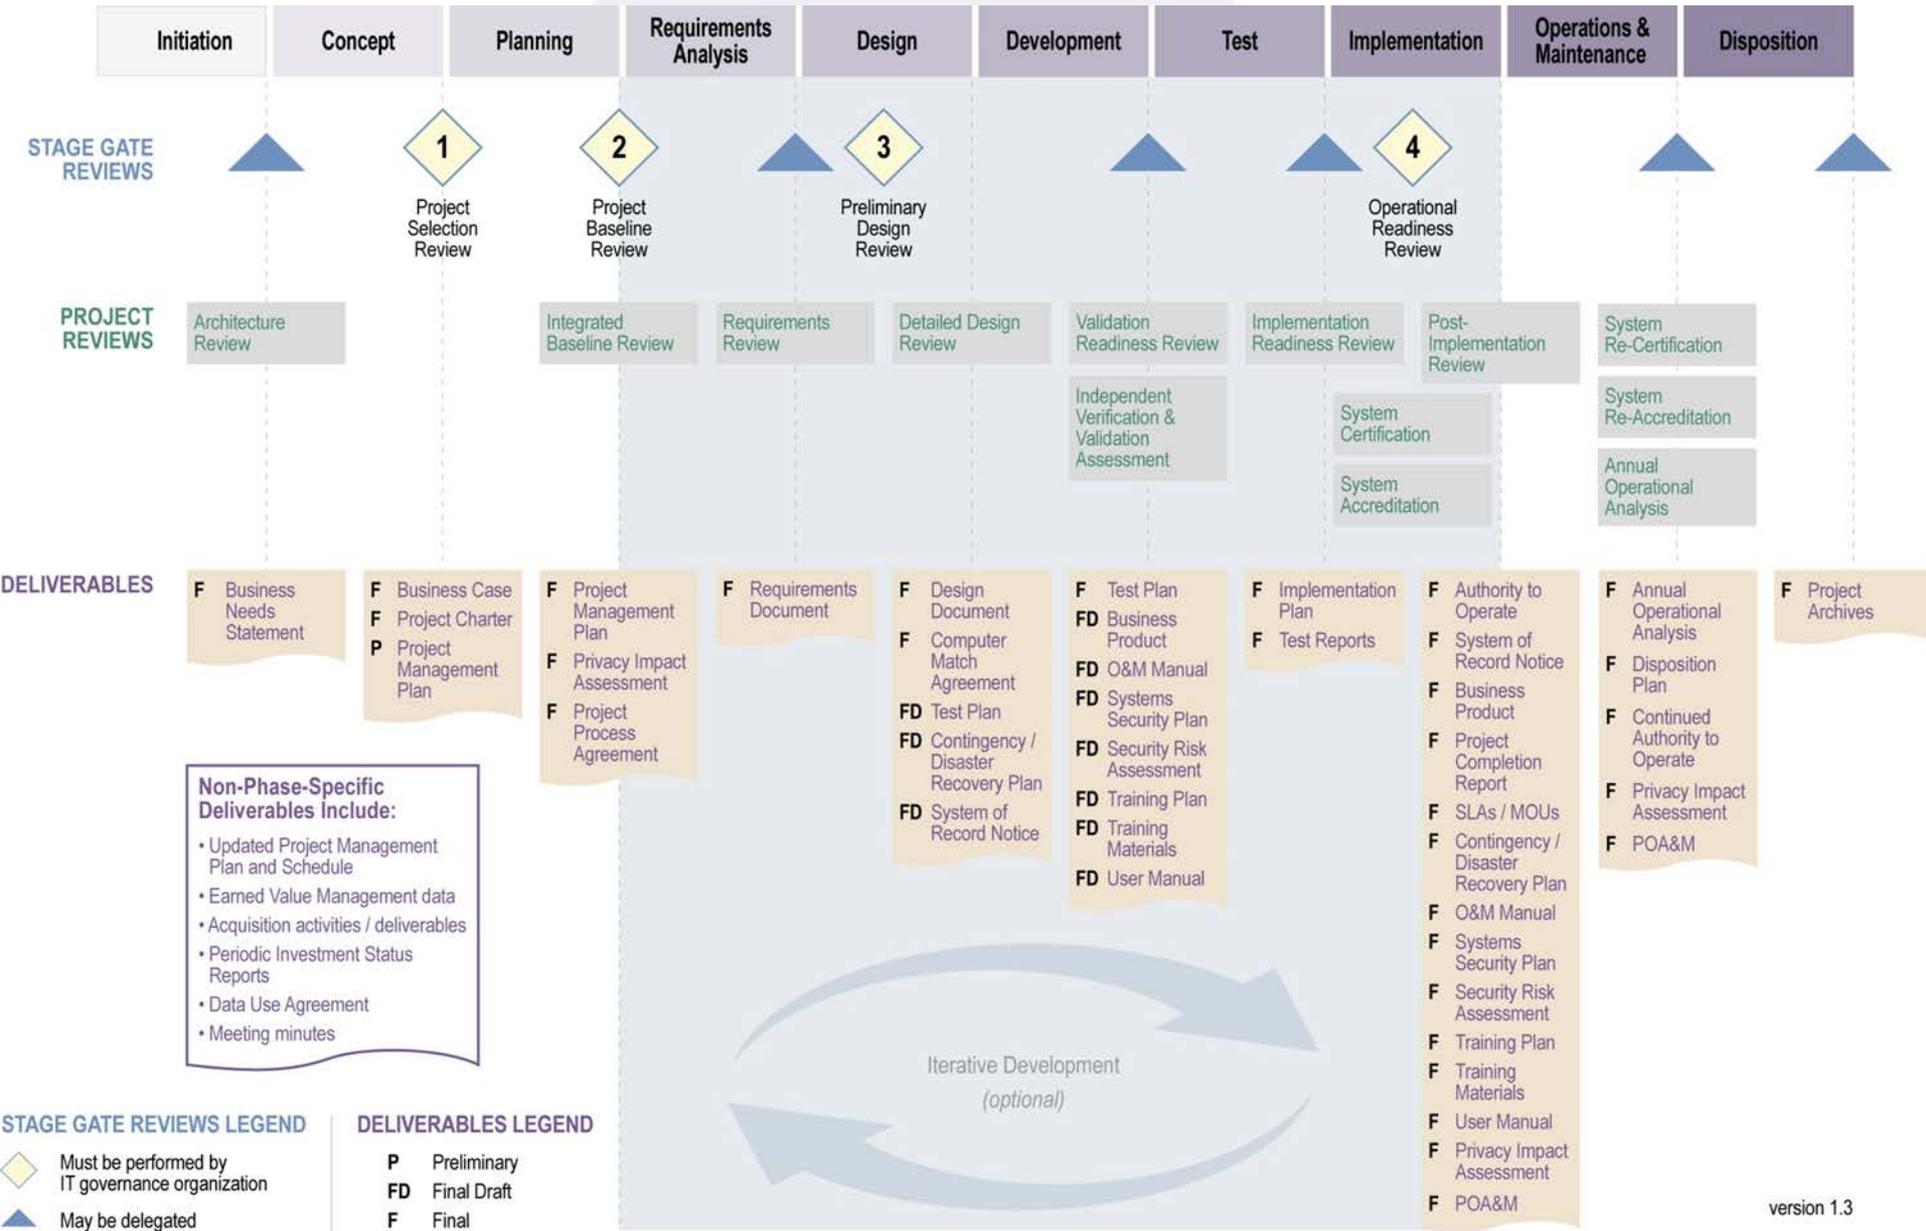

Benefits of Frameworks

- Improve consistency of performance
- Increase competitive advantage
- Raise effectiveness and efficiency
- Enhance organizational capabilities
- Lower costs and risks
- Improve collaboration across projects

Clearing the Confusion & Adding Value

1. Use both EPLC and ITIL in order to benefit:
 - the project management effort
 - the customer
 - the organization
2. Investigate a suggested EPLC/ITIL approach

Enterprise Performance Life Cycle

Purpose of ITIL

“ITIL is used by organizations worldwide to establish and improve capabilities in service management.”

Office of Government Commerce (UK), *ITIL: Service Strategy*, (Norwich, UK: The Stationery Office, 2007), 7.

“Service Management is a set of organizational capabilities for providing value to customers in the form of services.”

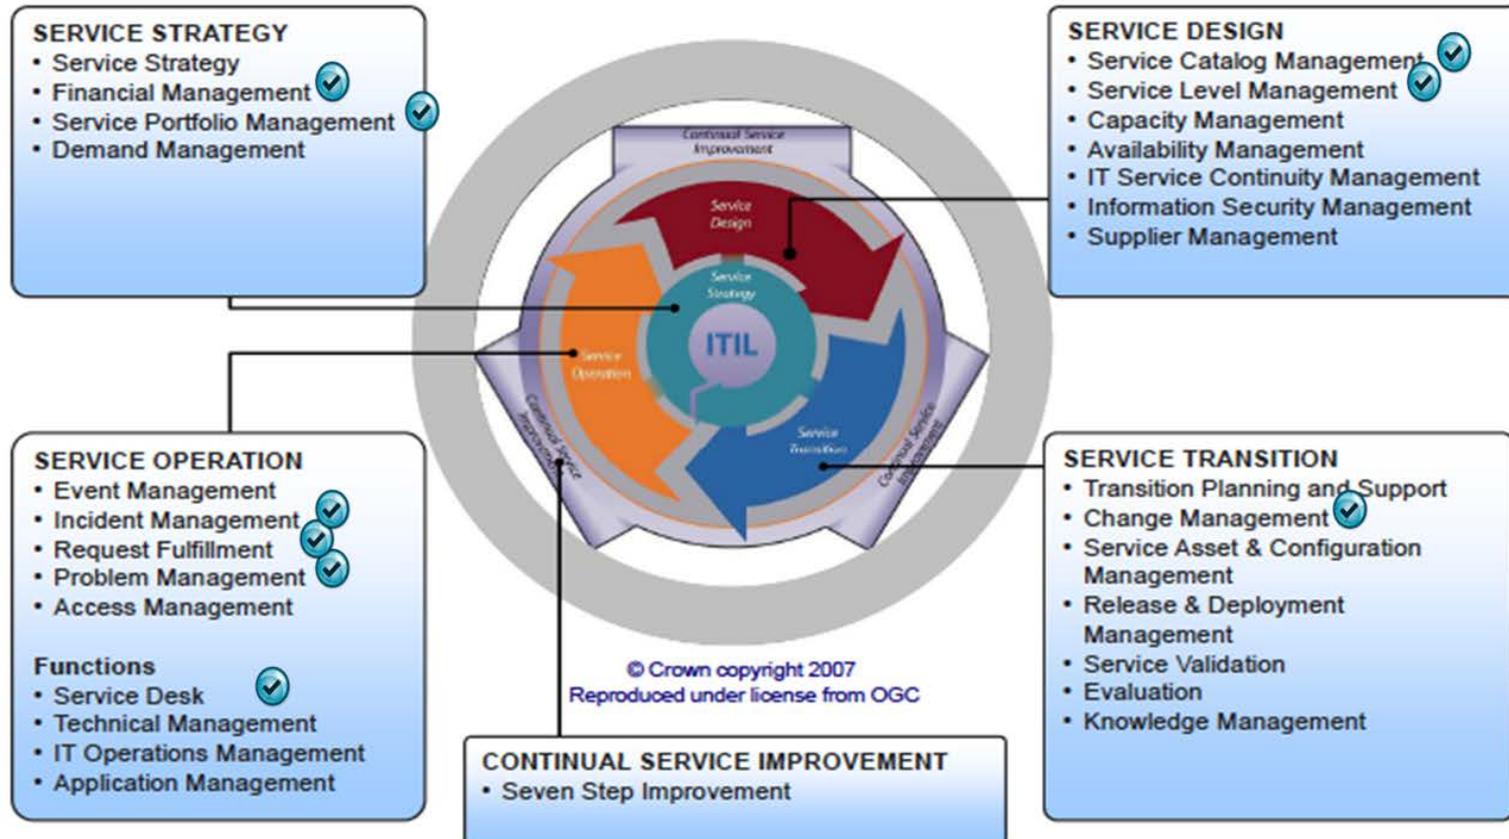

Office of Government Commerce (UK), *ITIL: Service Strategy*, (Norwich, UK: The Stationery Office, 2007), 250.

ITIL focuses on *outcomes and services* to meet customer requirements.

Lifecycle Processes

Lifecycle Processes

✓: ITIL Processes at CIT

What's Common: EPLC and ITIL

- ✓ Lifecycle-based
- ✓ Parallel (but not identical) terms
- ✓ Matching activities
- ✓ Comparable goals
- ✓ Process Driven
- ✓ Allow tailoring
- ✓ Non-prescriptive

EPLC and ITIL Differences

EPLC

- **Is mandated**
- Is designed specifically for HHS OPDIVs
- Stage Gates are governance check-ins
- Project-based
- Focus on *project control and accountability*

ITIL

- An IT industry framework – proven over 20 years – that delivers:
 - Service Management
 - Process improvement
- Focus on *value created and delivered to customer*

The Most Significant Distinctions

- Mandated vs. Non-Mandated
 - Assume EPLC must be done
 - Allow for Project Management *and* Service Management differences
- Comprehending *Projects vs. Services* is the fulcrum with which to leverage benefits
- Necessary Definitions: IT System, IT Service, IT Project

What is an IT System?

- An integrated composite of one or more of the processes, hardware, software, facilities, formal documentation, people, and configuration items that provides capability to satisfy a stated need or objective.
- *A collection of configuration items* (hardware, software, and documentation) *that are necessary to deliver an IT Service.*

What is an IT Service?

- Service
 - Delivers Value
 - Facilitates Outcomes
 - Enhances Performance
 - Reduces Constraints
 - Owns costs and risks
 - Increases the probability of desired outcomes
 - Continually seeking improvement (*Plan-Do-Check-Act*)

What is an IT Project?

“A project is a temporary planned endeavor funded by an approved information technology investment; thus achieving a specific goal and creating a unique product, service, or result. A project has a defined start and end point with specific objectives that, when attained, signify completion.”

Office of the CIO, Office of the Assistant Secretary for Resources and Technology, Health and Human Services, *Enterprise Performance Life Cycle Framework Overview Document*, (Washington, DC: January 18, 2010), 10.

Project and Service Management

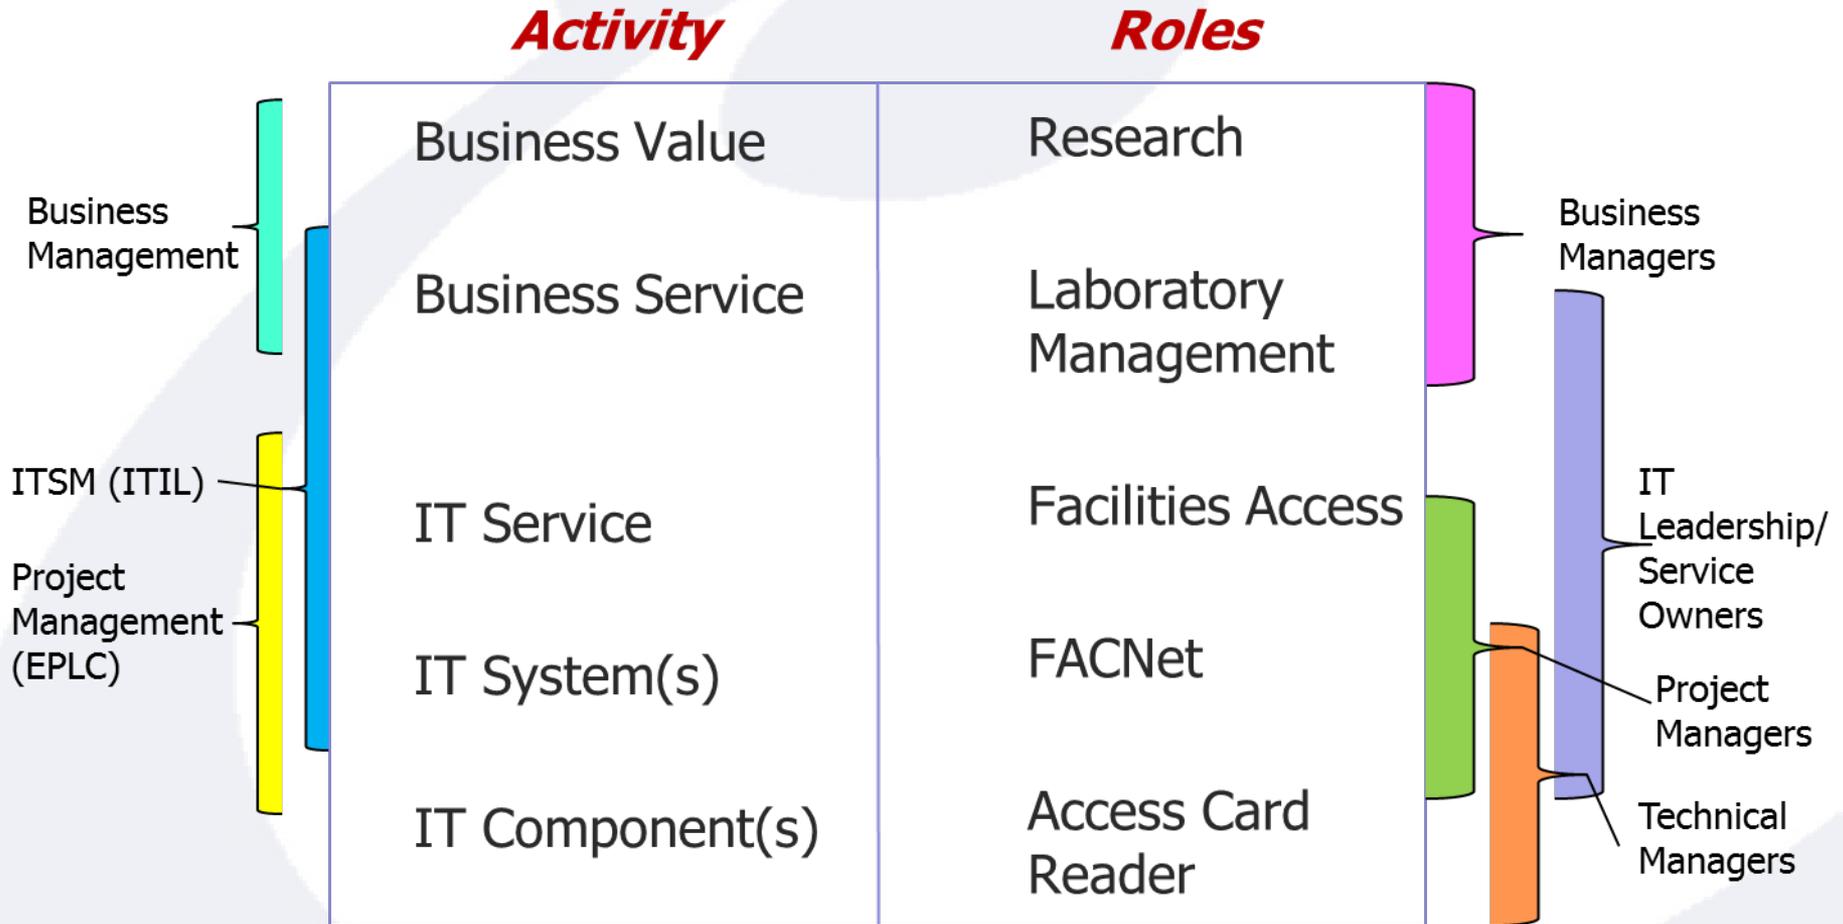

Projects

- **Projects normally used to build applications and systems**
- Projects have defined deliverables
- Projects end or have signifiers of completion
- Transfer of “ownership” from development organization to operations organization

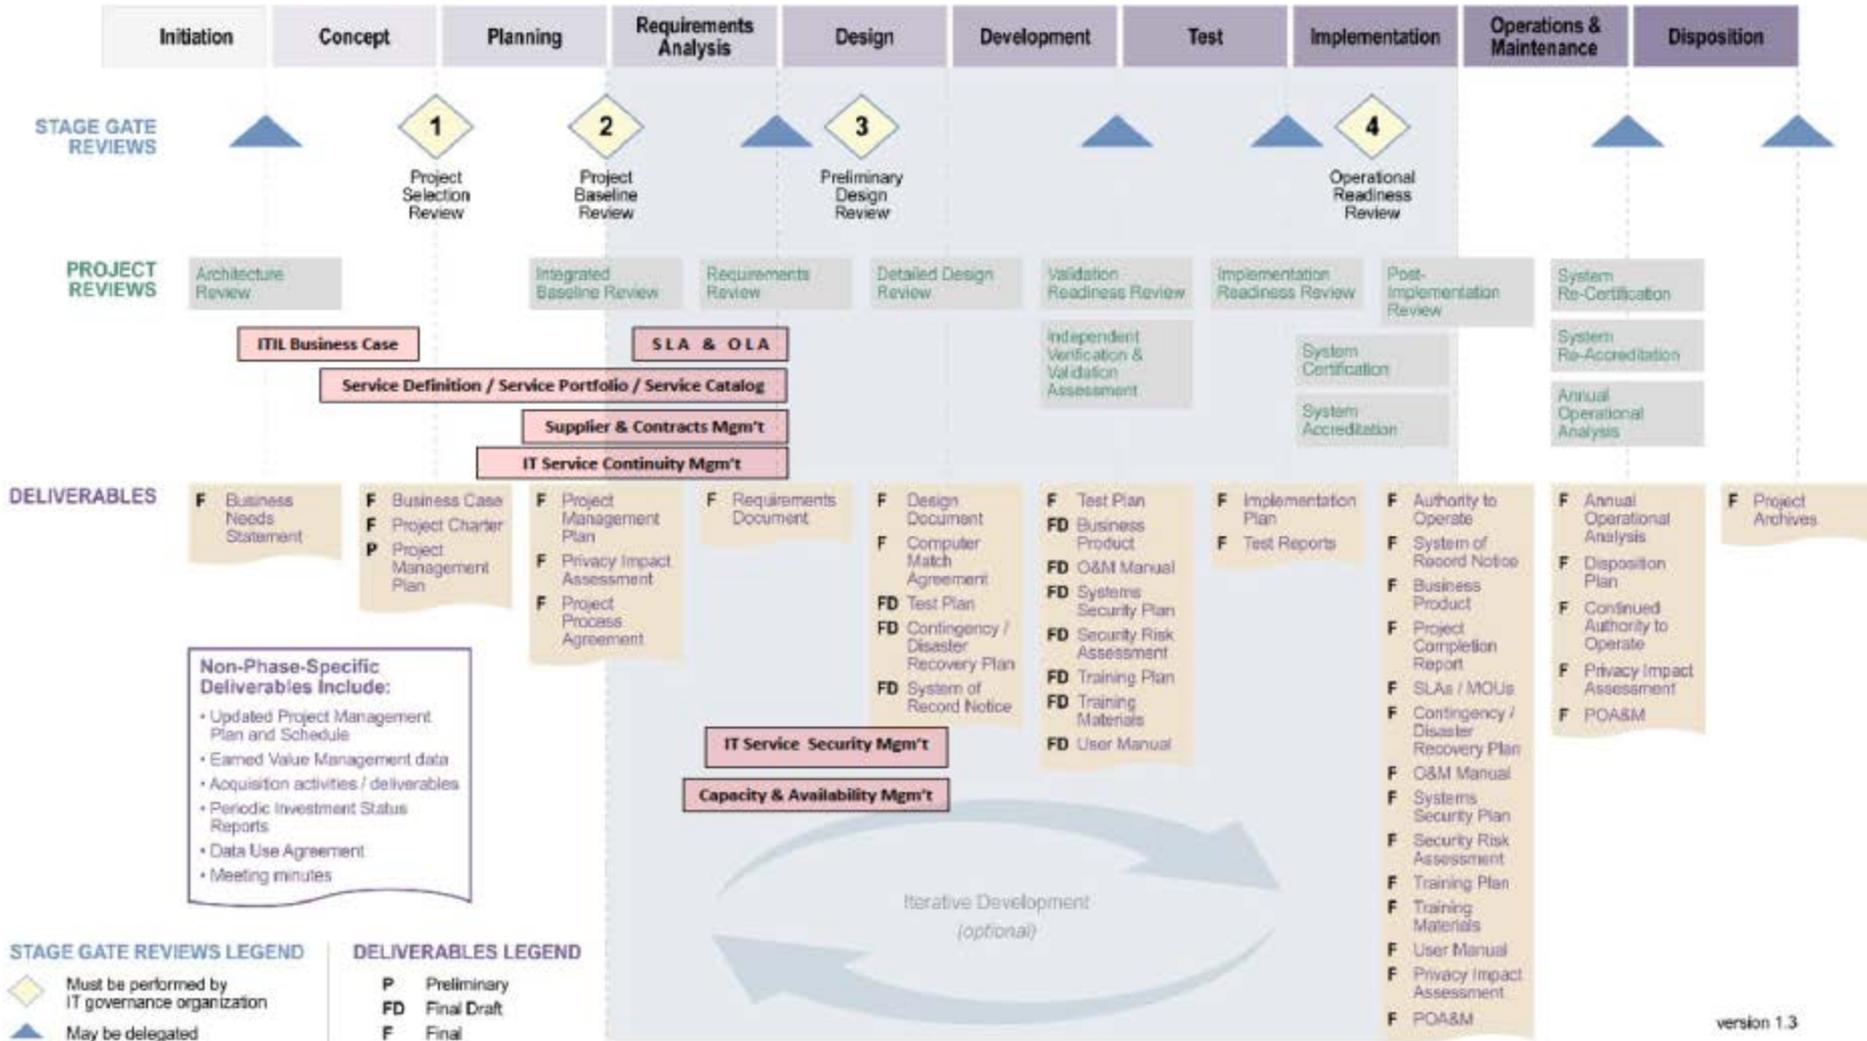

Services

- Service management does not typically develop solutions
- Service Management run operations
- Services are rarely built to be handed off to another party
- Services are ongoing
- Assume costs and risks on behalf of customer

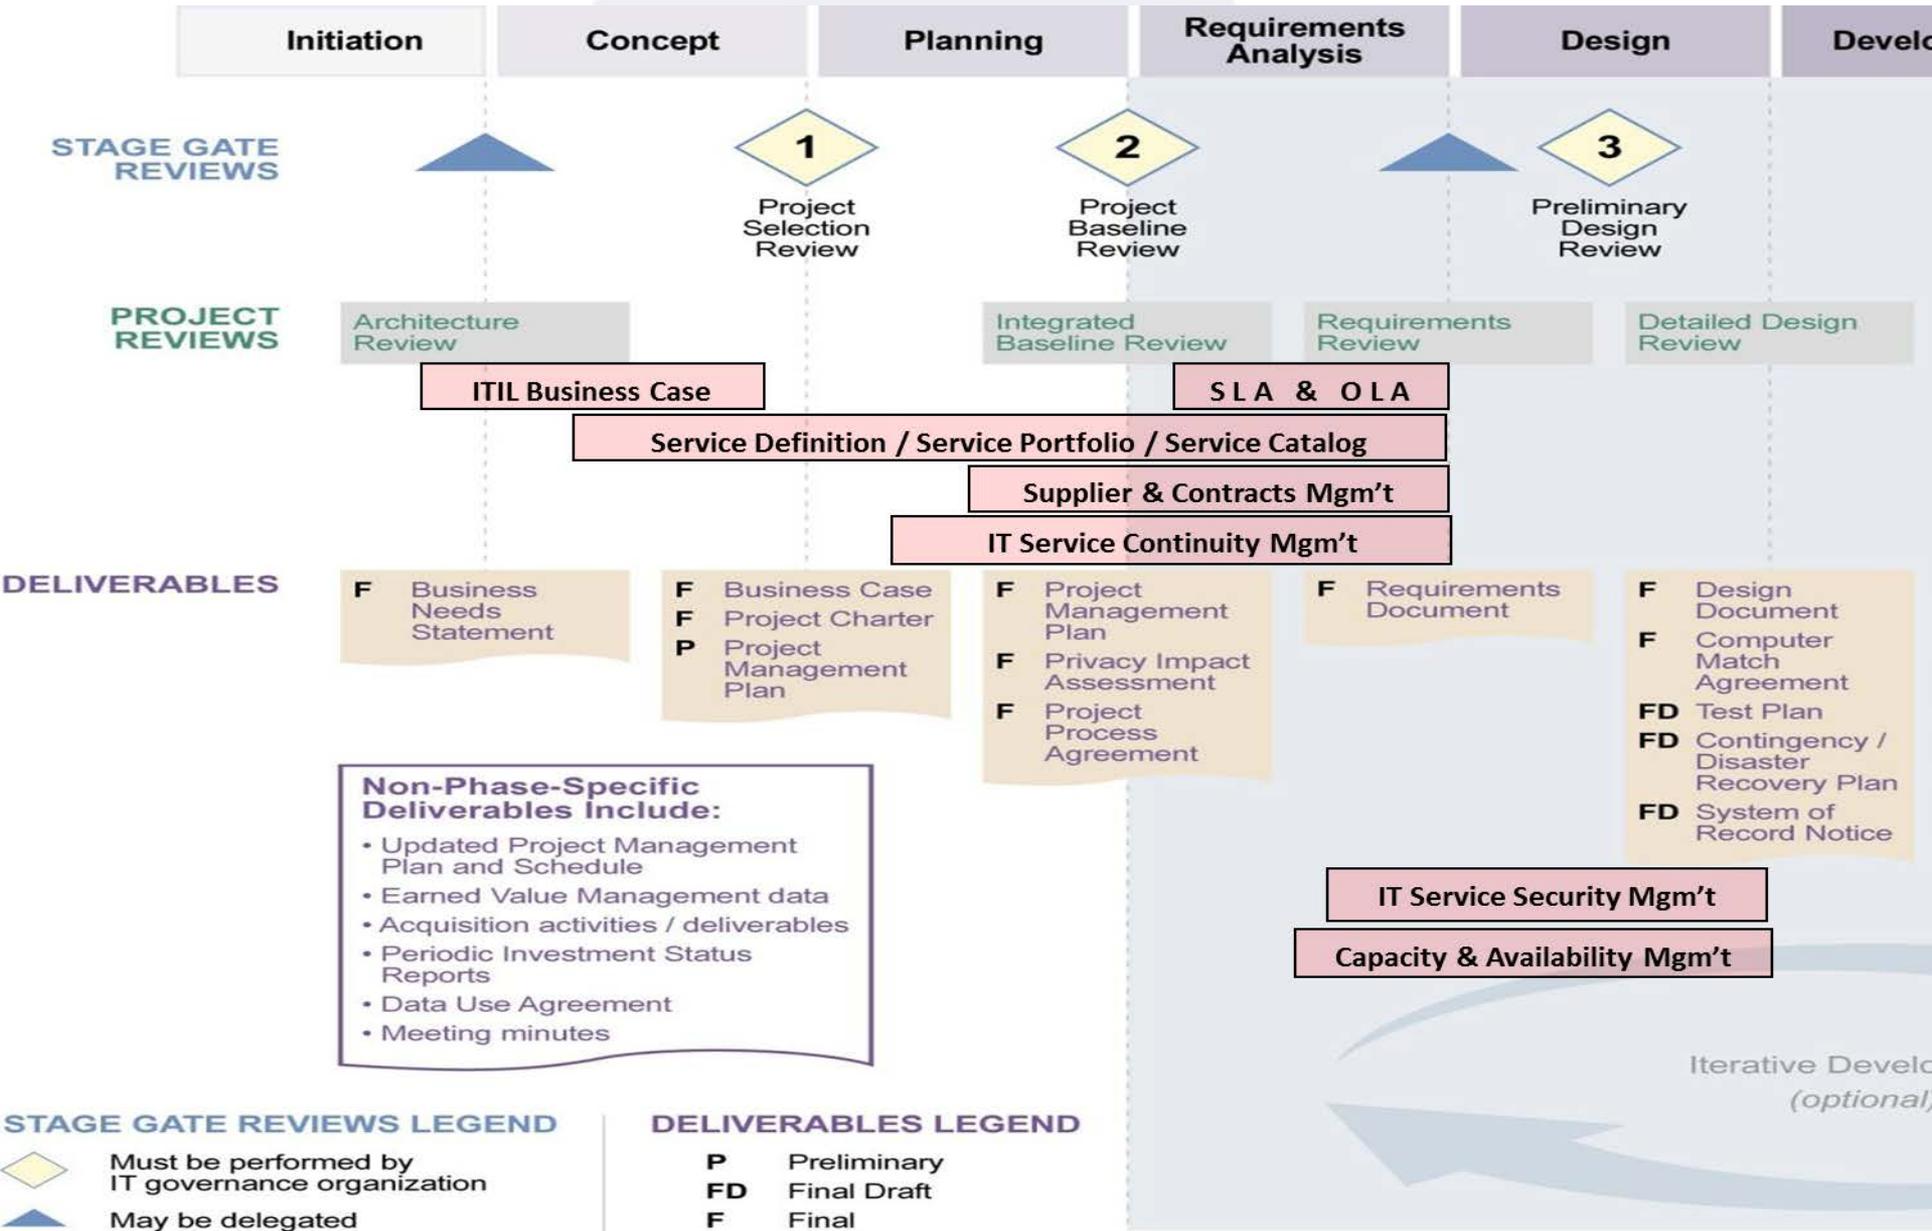

Management Domains

EPLC & ITIL Overlay

EPLC & ITIL Overlay

Complementary Approaches

- Service Management uses Project Management to build its systems (. . . *EPLC enhances ITIL*)
- Project Management uses Service Management to run what it builds (. . . *ITIL enhances EPLC*)
- Guidance from one can help accomplish the other, i.e.,
 - Use ITIL guidance to enhance EPLC documentation
 - Could use EPLC documents as part of ITIL process.

Final Thoughts

- EPLC strengthens project management rigor and accountability through a mandated process.
- ITIL provides a service management framework. The ITIL processes within that framework exist for the primary purpose of planning, delivering and supporting IT services. *Specific ITIL process artifacts inform the EPLC phases and deliverables.*
- Together EPLC & ITIL enhance our organizational capability to deliver value to our customers.
